

Beyond the future: emergencies, risks, challenges, transitions and opportunities

Dr. Janet Askew
ECTP-CEU

Prof. Simin Davoudi
Newcastle University

Prof. Gert De Roo
University of Groningen

December 16, 2022
9.30-11.30 AM CET

Chair:

Prof. Marichela Sepe, GUDesign Network Coordinator

Speakers:

Dr. Janet Askew, ECTP-CEU

Flexible approaches to planning: the role of the professional planner

Prof. Simin Davoudi, Newcastle University

Evolutionary Resilience. Relational Space and Adaptive Planning

Prof. Gert de Roo, University of Groningen

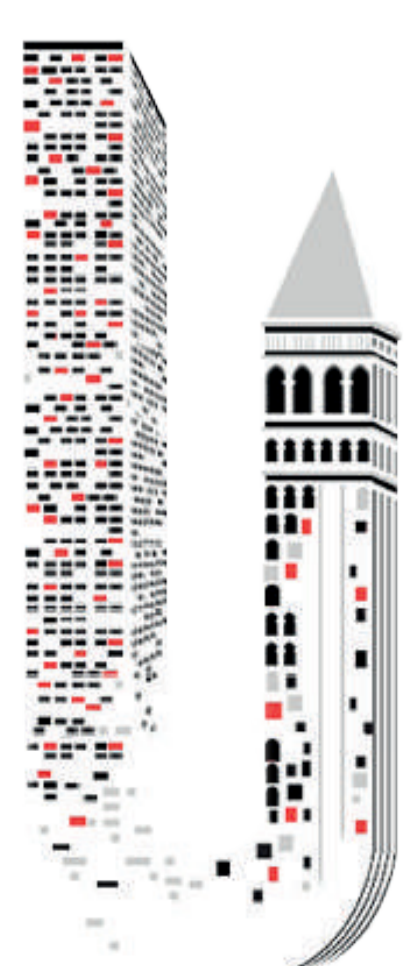

Planning in Uncertainty - Rationalities for adaptive behavior

Discussion

The Covid-19 emergency, albeit in different ways and measures, is changing habits and use of places and cities globally. In many cities, public spaces have become completely empty for months and new urban landscapes have replaced the old ones, transforming the private into the public. Their reopening took place after months of closure, allowing again "live" social interactions, while respecting the physical distance, confirming the importance for all the people of these places. At the same time, in contemporary territories it is increasingly happening that different types of crises occur simultaneously, making the resolution of difficult urban conditions complex as the different risks overlap, involving social, economic, environmental, health and liveability issues. Furthermore, every place is different and has its own peculiarities, thus requiring different times and methods to deal with crises, just as the risks are also different from each other, requiring a different resilience. To achieve sustainable adaptation and regeneration of places affected by multiple risks, in accordance with the principles of the New Urban Agenda of Quito 2016 and the 17 SDGs of the 2030 Agenda, it is important to address and communicate these issues from many and integrated points of view. If on the one hand, therefore, the challenges that are emerging in this scenario require more integrated and flexible interventions, on the other hand it is necessary to identify the different interrelations between the disciplines in this transition phase in order to be able to propose, beyond the future, new and more adequate forms and tools for the territorial project. These issues, in the framework of the 13° INU – Italian Urban Planning Institute - Study Day, will be discussed by three experts, namely Janet Askew, Simin Davoudi and Gert De Roo, who will open us to further related and urgent questions of debate on urban design topics.
